

## Clavister CorePlus 9.20 – Product Overview

### Product Description

Clavister CorePlus 9.20 is our latest version of our award-winning network security operating system powering the Clavister Security Gateway Series, our premium enterprise unified threat management (UTM) security solution.

The Clavister CorePlus 9.20 features support for SSL VPN, Intel x86 AES acceleration support, improved IDP administration and various improvements in security policy administration.

For more detailed information about the Clavister CorePlus 9.20 release, please see the release highlights data sheets available at [www.clavister.com/resources/product-data-sheets](http://www.clavister.com/resources/product-data-sheets).

### Target Customers

The target customers are new customers who require SSL VPN functionality, as well as customers who require 10GbE interfaces, such as the new Clavister Security Gateway 4500 Series. Clavister Virtual Security Gateway (VSG) customers will also benefit from a 300% gain in IPsec performance.

### Positioning

Clavister CorePlus 9.20 release is positioned as a best-in-class, high performance enterprise unified threat management (UTM) security solution for medium to large enterprises.

### WE ARE NETWORK SECURITY – Tag Line

"Clavister protects companies from security breaches of their IT networks which can cause loss of integrity, disruption, and financial loss – issues which can negatively impact the company brand, business and value. [WE ARE NETWORK SECURITY.](#)"

### Top Features

1. SSL VPN support
2. Support for Intel x86 AES acceleration
3. Support for Clavister Security Gateway 4500 Series
4. Improved IDP administration
5. Improved security administration

### Clavister CorePlus 9.20 release – Core Features

The new Clavister CorePlus 9.20 release offers a wide range of functionality and best-in-class performance. Some of the highlights are:

- **SSL VPN support** – Clavister CorePlus 9.20 includes a completely new way to manage mobile users. Instead of having to manage complex deployments of IPsec/L2TP clients in order to offer roaming users access to corporate data and systems, organizations can now deploy Clavister SSL VPN client. The Clavister SSL VPN Client is a light-weight client with virtually no configuration requirements. Even inexperienced users can manage the installation without requiring assistants from an already strained IT support department. The Clavister SSL VPN feature included in all Clavister Security Gateway helps organizations drastically lower their costs for administration and at the same time improve the overall IT service for its users.
- **Support for Intel x86 AES acceleration** – Clavister CorePlus 9.20 supports acceleration of Advanced Encryption Standard (AES) encryption and decryption by leveraging the crypto acceleration features available in the later CPU models from Intel. Thanks to the highly optimized architecture of Clavister CorePlus, users who are running the Clavister Virtual Security Gateways in a VMware virtual environment with an Intel CPU supporting the AES acceleration feature are able to increase their VPN performance of up to 300 percent.

- **Support for Clavister Security Gateway 4500 Series** – The new Intel interface driver accompanying the Clavister CorePlus 9.20 release will enable customers to take full advantage of the 10GbE interfaces available in the Clavister Security Gateway 4500 Series.
- **Improved IDP administration** – Clavister CorePlus 9.20 offers a much more intuitive way of administrating IDP policies and simplifies the process of selecting the most relevant signatures. Thanks to the tree-structured and hierarchy based administration, administrators are also able to create policies which enable them to protect their network more efficiently and thereby reducing the risk of costly security breaches, service interruptions and data loss.
- **Improved security administration** – Clavister CorePlus 9.20 features a number of improvements that help administrators streamline their work and make it more more efficient. For example, administrators are now able to clone complete policies including Application Layer Gateways (ALG), Service Definitions, etc. Administrators can now clone existing objects and modify only the necessary parameters, without having to create everything from scratch.

### Pricing

The Clavister CorePlus 9.20 release is available for free-of-charge for customer with active Clavister Software Maintenance Agreement. Customers with expired agreements should contact their local Clavister Sales Representative or visit [www.clavister.com](http://www.clavister.com) for information about nearests Clavister Sales Representative and how to purchase a Clavister Software Maintenance Agreement.
